

The Challenge (1)

Water requirements
for food production
(km³/year)

- Over 20th century, global increase of **fossil fuel** use by factor of 12, and material extraction 8 fold
- Demand for **food, feed and fibre** may increase by 70% by 2050
- 60% of world's major **ecosystems** that help produce these, already degraded or used unsustainably
- WBCSD estimates: **by 2050** need for **4 to 10 fold** increase in resource efficiency, significant changes needed **by 2020**
- **EU** consumes 16 to. of material p.a., of which 6 to. become waste

The Challenge (2)

- Competition for resources (including raw materials) increases, scarcities => prices rise => impact on European economy

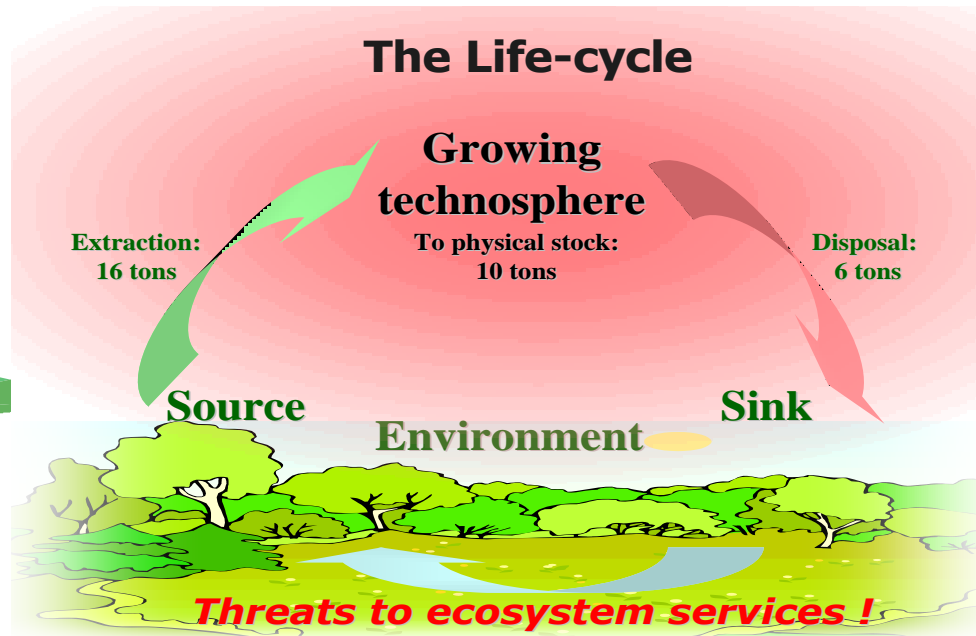

Source: World Bank Commodity Price Data (Pink Sheet), historical price data, available from <http://blogs.worldbank.org/prospects/global-commodity-watch-march-2011>

The Challenge (3)

A definition of Resource Efficiency

- Resources include all material and natural resources, from food, timber, and biodiversity in the widest sense, to energy, metals, soil, water, minerals, our atmosphere and land.
- Resource Efficiency is about:
 - Sustainable management and use of resources throughout their life cycle
 - Producing more value with less material and consuming differently, within our planet's natural limits.

Opportunities from resource efficiency

***Recent modelling results: Reduction of the total material requirements (TMR) by 15% can boost GDP by up to 3.6% and employment by around 2.5 m.
McKinsey: \$ 3.5 trn gain in improving resource efficiency***

■ Short term benefits

- Growth and job creation
- Improving competitiveness and security of supply
- Inducing innovation
- Supporting fiscal consolidation

■ Longer term opportunities

- Economic and Environmental resilience
- Improving competitiveness and security of supply
- Improved quality of life and human health
- Global stability

Policy process: EU and MS to deliver jointly under Europe 2020

- **Europe 2020:** Sustainable growth as one priority; Resource efficiency as key element;
- **Flagship Initiative “A resource efficient Europe”:** help decouple economic growth from resource use, support shift towards a low carbon economy (renewable energy sources, transport, energy efficiency);
- **Roadmap to a Resource Efficient Europe (Sept. 2011):** framework for implementation of EU and MS initiatives for resource efficiency

The Roadmap – general approach

■ **Three timelines**

- long term **2050 vision** (↔ short-termism)
- milestones for **2020**
- actions to be taken **now** by the **Commission** and **MS**

■ **Three action lines**

- Transforming the economy
- Safeguarding the resilience of our natural capital
- Tackling key sectors

■ **Shared responsibility of EU and MS: governance and monitoring under Europe 2020**

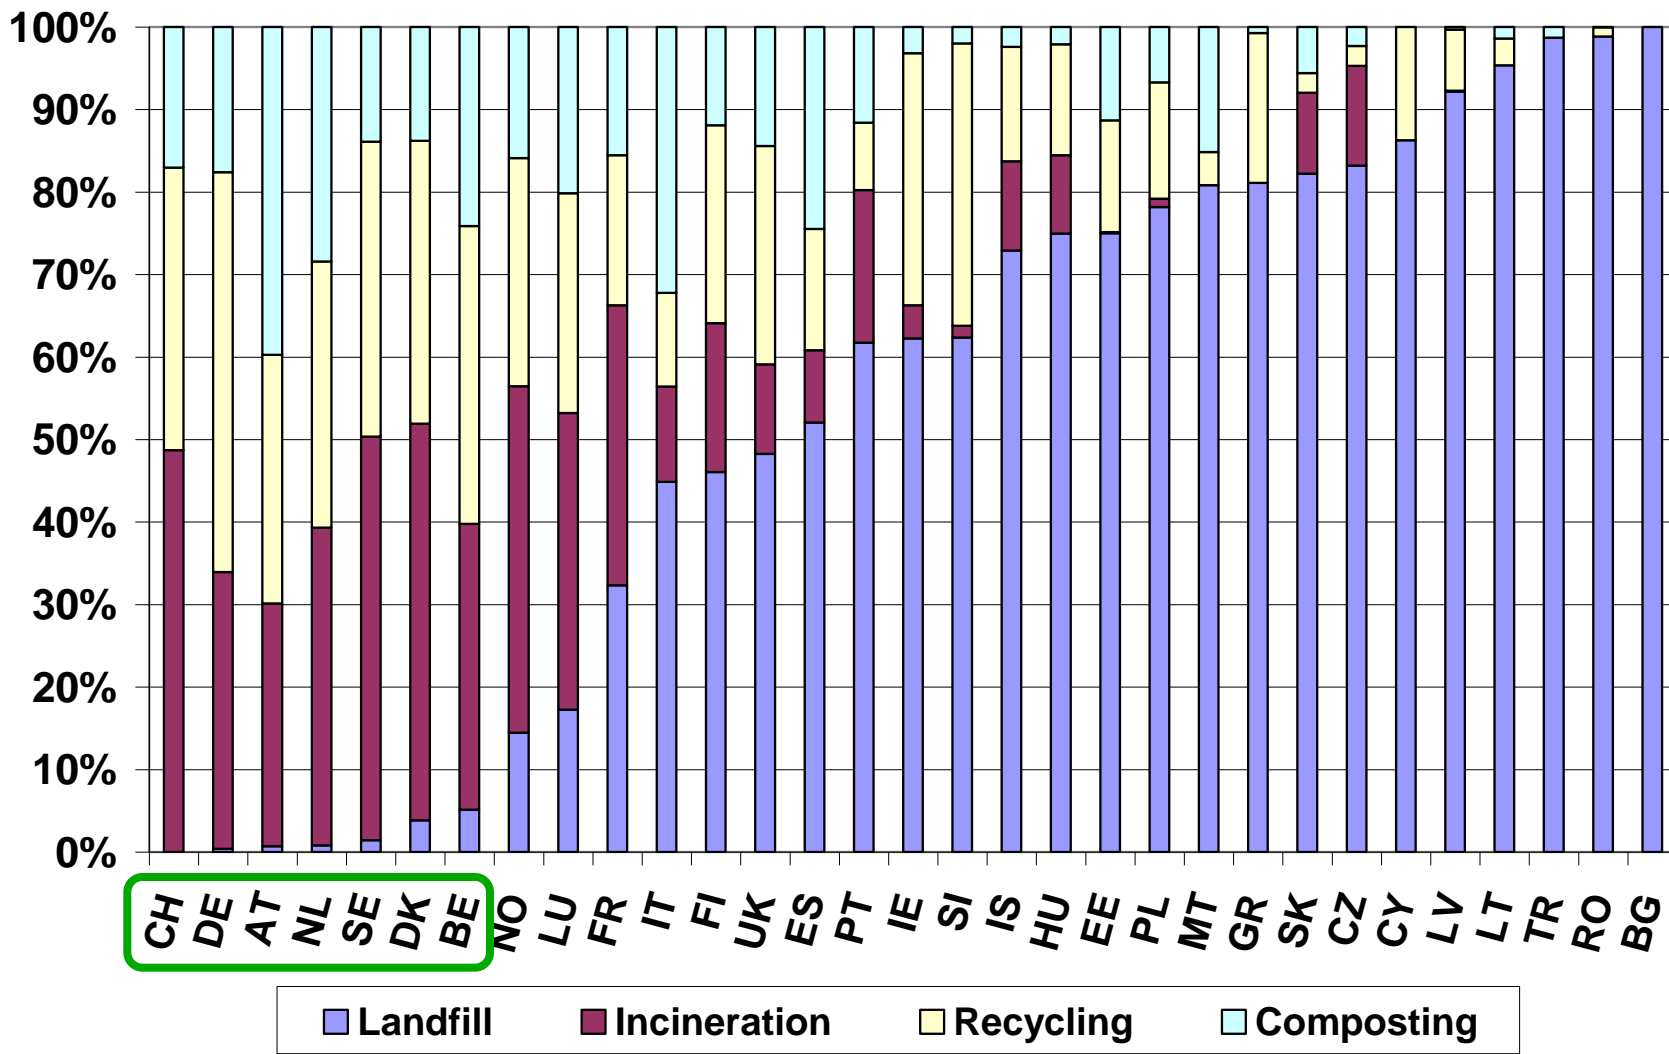

Opportunities to improve: EU Share of world eco-industries, 2008

Transforming the Economy

- **Improving products, boosting efficient production and changing consumption patterns:** GPP, LCA methodology, product design, new business models, assistance to SMEs, etc.
- **Turning waste into a resource:** stimulating secondary materials markets (end-of-waste criteria, recycled content), assessing new targets, tackling illegal waste shipments, improving implementation.
- **Stimulating innovation:** Horizon 2020, innovation partnerships, joint technology initiatives (public-private partnerships).
- **Getting the prices right:** Phasing out environmentally harmful subsidies; shift from taxing labour towards environmental taxes.

Recycling of municipal waste in 2009

Safeguarding natural capital

- **Ecosystem services** → Incorporating their values in accounting and decision making
- **Biodiversity** → Halting the loss and restoring
- **Minerals & metals** → Improving efficiency through SCP
- **Water** → Water Blueprint; water efficiency targets
- **Air** → Comprehensive review in 2013
- **Land and soils** → Land use (no net land take by 2050); soil sealing; contaminated sites
- **Marine resources** → EHS; marine litter; network of protected areas; business opportunities

Tackling key sectors

■ Food

- Addressing consumption patterns
- Sustainability criteria for commodities
- Phosphorus: security of supply and sustainable use

■ Housing / buildings

- Promoting investment and innovation in construction => sustainable housing, growth and jobs.

■ Efficient Mobility

- Integrating resource efficiency objectives in transport, incl. impact on all resources, e.g. land, air, ecosystems.

Steps to implement the Roadmap – the European Semester

- **Ensure mutually supporting actions** at MS, EU and international levels and **Sharing of best practices** among MS.
- Inclusion of environment/resource efficiency issues in Semester: In 2012, **Country-specific Recommendations** on environmental tax reform; in climate and energy area (incl. Renewables, energy efficiency of buildings), some on water and waste management.
- Deeper analysis on opportunities in waste management in **Staff Working Documents**, particularly on waste.

Opportunities to improve: Environmental taxes as a % of all taxes, 2009

EUROPEAN COMMISSION

environment

Steps to implement the Roadmap – further policy initiatives

- Revision of **EIA** directive (2012)
- Green paper on **green infrastructure** (2012)
- Proposal for a **7th EAP** (2012)
- **GDP and beyond**: Report, Communication (2012/3)
- **Greening the single market** (2013)
- Follow-up to **Rio+20** (2013)

Steps to implement the Roadmap – Stakeholder involvement

- **Resource efficiency platform (EREP)**: various stakeholder groups, debate on policy options, provide guidance/advice, concrete ideas for actions.
 - ➔ **3 Working groups**: circular/green economy; objectives and measurement; framework conditions (incl. MBI).
- Part of wider consultation/debate structure: open web platform for wider consultation (**OREP**) – mirrors debates in EREP, welcoming papers and contributions.
- Preparations for **Finance Round Table**: complement EREP working group on framework conditions.

Thank you!
