

## CIRCULAR CARBON ECONOMY: AN INCLUSIVE APPROACH TO CLIMATE CHALLENGE

The Circular Carbon Economy (CCE) builds on the pillars of the circular economy, where operating systems are transformed from their existing linear structures to more circular systems, mirroring nature's biological cycle. The CCE is the prism through which carbon is transformed into a valuable resource that can be utilized or stored, guided by the 4Rs: Reduce, Reuse, Recycle, Remove.

Following the endorsement by G20 Leaders of CCE framework, the Kingdom of Saudi Arabia has launched a National Program to deploy CCE. This WCEF2021 side event, organised by the Saudi Ministry of Energy, brings together leaders from academia, government and private sectors to discuss the opportunities in translating CCE into a reality.
